Experience

Amazon

Aug 2024 – Dec 2024, May 2025 – Aug 2025, Jan 2026 – present

Software Development Engineer - Amazon Robotics

- **Created** a feature to display upcoming shelving unit dimensions in robotics workcell software, **increasing** associate productivity.
- **Lead** development of new application allowing users to generate custom reports on robotic warehouse shelves.
- **Designed** and **implemented** an integration test system for testing workflows of new station software, **reducing** QA time and **increasing** feature output.
- **Architected** and **developed** a method of creating fulfillment metrics dashboards **reducing** development time by **50%**.
- **Took ownership** of team's front-end projects ensuring improved design, stability, and functionality for customers.
- Incharge of **porting** legacy dashboards to a new stack, contributing to the **deprecation** of vulnerable software.
- **Demonstrated expertise** in creation and **deployment** of new services, using technologies such as **AWS Lambda**, **DynamoDB**, **S3**, and **Athena**.

OmaScan

Nov 2025 – present

Lead Architect

- **Owned** end-to-end **architecture** of a **LiDAR**-based occupational therapy platform, spanning **AWS** infrastructure, **NestJS** backend services, and **Next.js** frontend applications from **prototype** to **production**.
- **Designed** and **deployed** **AWS**-native infrastructure using **infrastructure-as-code**, balancing **serverless** and **containerized** services for scalability, security, and cost efficiency.
- **Architected** a modular **NestJS** backend and **Prisma**-backed data layer, defining service boundaries, **API** contracts, and data flows for scan ingestion, processing, and analytics.
- **Led** frontend architecture with **Next.js**, establishing performance-conscious data-fetching patterns and deployment workflows, while defining **CI/CD** pipelines for reliable releases.

Bluedrop ISM

Jan 2022 – Aug 2022, May 2023 – Aug 2023, Jan 2024 – April 2024

Full-Stack Developer

- **Architected** and **developed** a metrics and telemetry system **cutting down** bug diagnosis time by **25%**.
- **Performed** major project **refactor** to ensure platform **security** and **stability**, **reduced** vulnerabilities from 200 to 0.
- **Developed** a new feature to allow for organization admins to **customize** links to align with an organizations own privacy policy and terms of service.
- **Demonstrated expertise** in **deployment** of new web services, ensuring seamless integration, and leveraging **containerization** technologies like **Docker** and **Kubernetes**.

Projects

Copper Social

Jan 2024 – Mar 2024

- **Developed** and **maintained** a **production-scale** monorepo for a **real-time** communication platform, **designing** backend **APIs** and data models using **Express**, **Prisma**, and **SQLite**.
- **Implemented** **real-time** messaging using **Socket.IO** and **built** user-facing features with **React** and **Remix**, supporting interactive, **low-latency** workflows.

Education

Memorial University of Newfoundland

St. John's, NL, Canada

Bachelor of Engineering - Computer Engineering

Class of 2027

Skills

Languages: JavaScript, TypeScript, C/C++, Python, Java, C#, Dart, SQL, HTML, CSS, Bash

Frontend: ReactJS, AngularJS, Flutter, Astro, NextJS, RemixJS, Webpack, TailwindCSS, ChakraUI, Bootstrap, Redux

Backend: NodeJS, ExpressJS, FeathersJS, FastAPI, Postgraphile, Apollo GraphQL, SocketIO

Database: PostgreSQL, SQLite, MySQL, Firebase, MongoDB

Tools: Git, GitHub Actions, Docker, Kubernetes, Helm, Tilt, OpenTelemetry, Grafana, AWS, Google Cloud, Digital Ocean
